

Thank you to the FCC for taking comments on low-power FM radio stations. I live in Asheville, North Carolina, and we have a great new low-power community radio station in town, WPVM 103.5 FM, but unfortunately I am unable to hear it even though I live in the heart of our city. There is a radio station at the same frequency in Knoxville, WIMZ, which is interfering with the signal. Please help us, the citizens of Asheville, to be able to hear our own local community radio station! I support LPFM stations, especially in this type of mountainous terrain, being able to own translators and I support getting rid of the third adjacent channel rule. I appreciate the FCC creating the opportunity for LPFM stations to exist, and we need your help so that WPVM can truly be the local community radio station that we so desperately need in Asheville! Thank you!
